

The interview of the moment... Solène Person!

What is your position and what are your main duties?

I have just joined the NOY project as local conciliation coordinator within the local relations team. I am based in Nantes to be able to keep in contact with elected representatives, environmental associations, tourism stakeholders and various people or organizations excluding fishermen which are part of Nicolas' scope.

What did you do before coming here?

I managed a project whose purpose was to anticipate the effects of climate change along the west coast of Normandy, in terms of risks (erosion, submersion and level of water tables) on urban and land use planning.

What do you like in your company?

I was immediately interested in these projects for which everyone seems to be hardworking while having some real laughs together (once a day at least)!

What is your best achievement since you arrived?

Knowing most of the municipal representatives without having had the opportunity to meet them (because of the elections to come)!

Something personal about you?

I love outdoor sports as they make me feel wholly connected to nature, but I cannot help renewing my basketball license year after year... So I only run or hike on holidays when I do not have any basketball competition!
